SAP On Premise Solutions

SAP S/4Hana

SAP S/4Hana is the intelligent ERP suite designed specifically for in-memory computing. SAP S/4Hana offers a customized consumer user experience thanks to SAP Fiori. SAP S/4Hana is the ideal choice for the company that wants to have a latest generation ERP. SAP S/4Hana offers scalability and flexibility for companies of all markets and of all sizes, from SMEs to large companies.

SAP Leonardo/SAP Intelligent Enterprises

SAP Leonardo IoT SAP Intelligent Enterprise allows you to have a business fully connected with applications, platforms and technologies Internet of Things (IoT). SAP Leonardo helps you think about new business models by leveraging real-time information and supports end-to-end adaptive processes.

SAP Manufacturing Intelligence and Integration

SAP Manufacturing intelligence and integration (SAP MI) was created to generate value from the Industrial Internet of Things (IIoT) by connecting the four M's of manufacturing, man, material, method and machine, to the extended supply chain. SAP MI collects the production informations and visibility needed to run and integrate production processes with business operations in real time.

SAP Fiori

SAP Fiori customizes and simplifies the user experience (UX) for SAP applications. Using modern UX design principles, SAP Fiori delivers a consumer-grade user experience based on roles across all business lines, activities and devices. SAP Fiori is natively supported in SAP S/4Hana, Ariba Mobile and SAP Cloud for Customer.

SAP Cloud Solutions

SAP S/4Hana Cloud

SAP S/4Hana represents the latest generation of SAP ERP and it is now available in cloud. It integrates every business process, it transforms real-time data into action and it increases employee productivity, with the security and compliance offered by the market leader. S/4Hana is available as a single tenant or multi-tenant version with costs per user on a monthly basis.

SAP C/4Hana

SAP C/4Hana is designed to build stronger relationships with customers and earn and maintain their trust. This in-memory suite of customer experience (CX) offers cloud solutions for marketing, e-commerce, sales, services and customer data and it uses technologies such as machine learning to enhance real-time relationships.

SAP SuccessFactors

SAP Success factor organizes all employee performance data, training and basic information into a system in a cloud system HCM/HRIS. This is about human capital management and employee self-service.

SAP Analytics Cloud

SAP Analytics cloud enables you to discover, analyze, plan, predict and collaborate in an integrated experience specifically for the cloud. Accessing all SAP data and integrating analysis directly into your business processes enables you to turn instant information into fast actions.
